

Standardizing Prenatal and Postpartum Care at Whiteriver Indian Hospital

ITCA MATERNAL HEALTH WEBINAR

MARCH 29, 2023

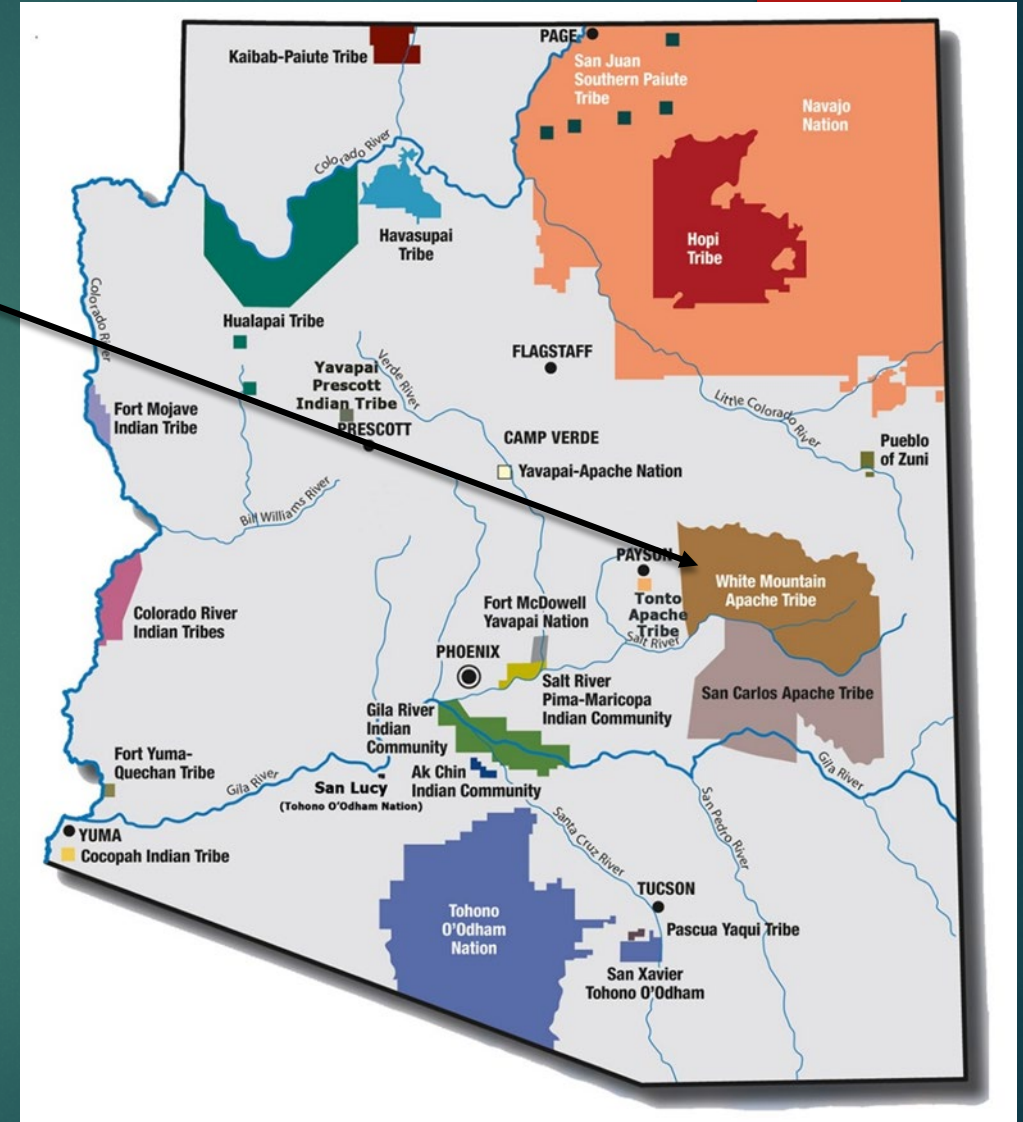

LAURA CLOSE, DNP, FNP-BC

IHS Acknowledgement and Disclaimer

- ▶ This material is the result of work supported with resources and the use of facilities at the Whiteriver Service Unit, located in the Phoenix Area of the Indian Health Service.
- ▶ I acknowledge my employment as a family nurse practitioner at the Whiteriver Service Unit, located in Whiteriver, AZ.
- ▶ The contents of this presentation do not represent the views of the Indian Health Service or the United States Government.

Whiteriver Service Unit (WRSU)

- ▶ Indian Health Service
- ▶ Located in the White Mountains
- ▶ Home to the White Mountain Apache Tribe
- ▶ 5500 ft elevation
- ▶ Land mass: 1.67 million acres, 2,600 mi² (slightly smaller than the state of Delaware)
- ▶ Population: 18,000 people

Whiteriver Service Unit

- ▶ Hospital that includes an inpatient unit, emergency department, outpatient clinics, operating room, and birthing center.
- ▶ Physical therapy, occupational therapy, speech therapy, dental and optometry are on campus as well.
- ▶ Some providers work in specific department, some work in different settings across the hospital.

Our Birthing Center

Standardized Prenatal Care

- ▶ General outline of visits
 - ▶ Every 4 weeks in first and second trimester
 - ▶ Every 2 weeks from 28-36 weeks
 - ▶ Weekly from 36 weeks to delivery
- ▶ Labs
 - ▶ First trimester labs (?genetic screening)
 - ▶ Late second trimester / early third trimester gestational diabetes screening
 - ▶ Third trimester labs
 - ▶ Group B strep swab
- ▶ Imaging:
 - ▶ Dating ultrasound
 - ▶ Anatomy ultrasound
- ▶ Immunizations (and explain why!)
 - ▶ Flu – when due during flu season
 - ▶ Covid – when due
 - ▶ Tdap – beginning of third trimester

Positive Pregnancy Test

- ▶ Can happen through the Birthing center, the ED, or regular clinic visit
 - ▶ Review possible dates, LMP, update GsPs
- ▶ First trimester order set
 - ▶ First trimester lab panel
 - ▶ Dating ultrasound
 - ▶ Nutrition consult
 - ▶ Prenatal medications: prenatal multivitamin, calcium/vitamin D, ? Ferrous sulfate
- ▶ Scheduling of first prenatal visit
 - ▶ Collaboration and communication with clinic staff

First Prenatal Visit

- ▶ Nurse / Medical assistant education
 - ▶ Health history and prenatal education
 - ▶ Prenatal packets / handouts
- ▶ Provider
 - ▶ Health history
 - ▶ Education
 - ▶ Physical exam
- ▶ Nutrition consult
 - ▶ With follow-up as needed

Provider aspect of first prenatal visit

- ▶ Health history
 - ▶ Overall PMH, surgeries, allergies
 - ▶ Review first trimester labs
 - ▶ OB history: GsPs, past deliveries and issues in prior pregnancy
 - ▶ Example: hx of preterm delivery at 34 weeks for preeclampsia with severe features
 - ▶ Medications
 - ▶ Bothersome symptoms
- ▶ Education:
 - ▶ Roadmap for typical prenatal course
 - ▶ Toxoplasmosis
 - ▶ Diet / exercise recommendations
 - ▶ OTC medications
- ▶ Physical exam

Low dose aspirin for pre-eclampsia prevention

- ▶ Recommended by ACOG, SMFM, USPSTF to prevent or delay the onset of preeclampsia
- ▶ 81mg po daily
- ▶ Initiate at 12-16 weeks gestation (optimal benefit)
 - ▶ Can be initiated up to 28 weeks gestation
- ▶ Continue through remainder of pregnancy
- ▶ Screen everyone at the first prenatal visit with aspirin checklist

Guidelines for Initiation of Aspirin for Prevention of Preeclampsia

Criteria for initiation of low-dose aspirin prophylaxis for women at risk of preeclampsia:

One of more high risk factor:

- ☐ History of preeclampsia, especially when accompanied by an adverse outcome
- ☐ Multifetal gestation
- ☐ Chronic hypertension
- ☐ Pregestational type 1 or 2 diabetes
- ☐ Kidney disease
- ☐ Autoimmune disease (ie, systemic lupus erythematosus, antiphospholipid syndrome)

Two or more moderate risk factors:

- ☐ Nulliparity
- ☐ Obesity (BMI > 30)
- ☐ Family history of preeclampsia (ie, mother or sister)
- ☐ Black persons (due to social, rather than biological, factors)
- ☐ Low income
- ☐ Age 35 years or older
- ☐ Personal history factors (eg, low birth weight or small for gestational age, previous adverse pregnancy outcome, > 10-year pregnancy interval)
- ☐ In vitro conception

Can consider if patient has one or more of these moderate-risk factors:

- ☐ Black person (as a proxy for underlying racism)
- ☐ Low income

Determination:

- ☐ Meets criteria for aspirin prophylaxis
- ☐ Does not meet criteria of aspirin prophylaxis

Dosing/initiation:

Aspirin 81mg po daily, initiated at 12-16 weeks gestation (up to 28 weeks, but considered optimal if before 16 weeks). Continue daily until delivery.

Population specific issues

- ▶ What are you seeing a lot of?
- ▶ How can you adjust your standards of care to address these needs?
 - ▶ Example – pregestational and gestational diabetes
 - ▶ Standard first trimester screening with A1c and random glucose
 - ▶ Early GTT based on risk factors (BMI > 30, hx GDM, A1c in preDM range)
 - ▶ Continuous glucose monitor – offered for anyone with pregestational or gestational DM to limit frequent finger sticks
 - ▶ Scan the meter and record their fasting and postprandial values

Integration of cultural practices

- ▶ Tour of birthing center during pregnancy to get a feel for the space – meet the staff, view the layout / style
- ▶ Natural deliveries with nitrous oxide as indicated
 - ▶ Spinning babies – used by nursing staff in late pregnancy to help promote maternal comfort and get mom and baby ready for labor
- ▶ Baby Friendly hospital designation – rooming in, lactation support (hospital-wide lactation education)
- ▶ We are a Birthing Center, which necessitates transfer of some patients with medical needs
 - ▶ Many of our prenatal patients meet criteria for high risk pregnancies and as such, deliver elsewhere
 - ▶ We maintain connections, facilitate transfers and ensure follow-up at every opportunity
- ▶ Postpartum practices – support practices across traditions – ask questions
 - ▶ Traditional ceremonies
 - ▶ Ex. Cradleboards and the “back to sleep” campaign

Team approach to care

- ▶ Necessitates agreement on how the team will address clinical concerns
 - ▶ Reinforcing similar education for patients
 - ▶ Standardizing care approach for things such as GDM, hx of preE, cHTN
- ▶ Consistency in charting – especially the assessment and plan

Prenatal assessment and plan

- ▶ Age of patient / Gravida & Para / Estimated gestational age / EDD ____ by _____. Pregnancy complicated by: _____
- ▶ 36yo G4P2012 at 24 3/7 EGA today with EDD 6/18/23 by sure LMP c/w 8w6d u/s. Pregnancy complicated by AMA, hx postpartum depression, hx genital HSV, hx c-section x 1, obesity.
 - ▶ AMA
 - ▶ Level II anatomy u/s 2/28/23 with normal anatomy
 - ▶ Normal genetic screening 12/16/22 via cell-free DNA
 - ▶ Hx postpartum depression
 - ▶ Mood stable today, evaluate each visit
 - ▶ At risk for postpartum depression following this pregnancy
 - ▶ Hx genital HSV
 - ▶ No active lesions this pregnancy
 - ▶ Start Valtrex prophylaxis at 36 weeks
 - ▶ Hx c-section x 1
 - ▶ G2: 5/11/18 due to breech presentation, successful vbac in G3: 6/19/20, interested in repeat VBAC
 - ▶ Low risk for vaginal birth on TOLAC risk assessment tool, has obgyn consult visit scheduled late April
 - ▶ Obesity
 - ▶ Pre-pregnancy BMI 37
 - ▶ Normal GTT / no GDM this pregnancy
 - ▶ Weekly NSTs at 37 weeks
 - ▶ Routine PNC
 - ▶ Continue prenatal care, ca/vit d
 - ▶ No anemia on first trimester labs, hgb 12.8, not on ferrous sulfate
 - ▶ Continue asa 81mg daily for preE prevention
 - ▶ It's a boy!
 - ▶ Plans to breastfeed
 - ▶ RTC 4 weeks, at f/u visit: third trimester labs, tdap, discuss circumcision

Follow-up appointments and flexible visits

- ▶ Patients always leave a prenatal visit with their next follow-up appointment in hand
 - ▶ With contact information to reschedule as needed
- ▶ Flexibility with patient appointments
 - ▶ Our patients often have difficulty with transportation, childcare, etc – we honor them and their pregnancy with seeing them during clinic hours whenever possible
 - ▶ Prenatal clinics across most days of the week
 - ▶ Birthing Center – always open

Educational topics by trimester

- ▶ Prompting the provider
- ▶ First trimester
- ▶ Second trimester
 - ▶ Anatomy ultrasound
 - ▶ GDM screening
 - ▶ MFM consult as needed
- ▶ Third trimester
 - ▶ Postpartum contraception
 - ▶ Newborn circumcision
 - ▶ Plans for breast and/or bottle feeding
 - ▶ Delivery planning (where, signs of labor)
 - ▶ Postpartum course

Lost to follow-up

- ▶ Call to check in, reschedule as needed
- ▶ Check with local community hospital
- ▶ Consult with community health resource
- ▶ Consult with department of preventative medicine outreach branch
 - ▶ Home visits to check on patient

Standardized Postpartum Care

- ▶ Postpartum care starts during prenatal care!
- ▶ Anticipatory guidance
 - ▶ Infant feeding / breastfeeding education and resources
 - ▶ Contraception counseling
 - ▶ Circumcision
 - ▶ Preeclampsia warning signs
 - ▶ Tour of the birthing center
 - ▶ Offering child birth education

Routine Postpartum Appointments

- ▶ 2-3 day postpartum check – Birthing Center
 - ▶ Lactation support
 - ▶ Postpartum depression screening
 - ▶ Acute concerns
- ▶ 2 week postpartum check – Prenatal clinic
 - ▶ Postpartum depression screening
 - ▶ Highlight resources for support
- ▶ 6 week postpartum check – Prenatal or PCP clinic
 - ▶ Postpartum depression screening
 - ▶ Follow-up on issues in pregnancy
 - ▶ Contraception
- ▶ Couplet care when possible
- ▶ “Discharge” back to primary care

Early motherhood is hard...physically, mentally, emotionally

- ▶ “The baby is the candy, the mom is the wrapper. Once the candy is out of the wrapper, the wrapper is cast aside.” - Alison Steube, MD University of North Carolina at Chapel Hill
- ▶ We are here to support mom's through it

Postpartum Depression Screening

- ▶ Postpartum depression is the most common complication of childbearing
 - ▶ Onset occurs before or during pregnancy in roughly half of the cases
 - ▶ Postpartum onset most often within the first few months after delivery, but can begin up to 12mo after delivery
- ▶ Risk factors
 - ▶ **Past history of perinatal or nonperinatal depression**
 - ▶ Stressful life, poor social and financial support, young age, single marital status, multiparity, intimate partner violence
- ▶ Baby blues / postpartum depression / postpartum psychosis
- ▶ Treatment as indicated: counseling, medications, psychiatry services, close follow-up

The Edinburgh Postnatal Depression Scale

Check the answer that comes closest to how you have felt in the **past 7 days**, not just how you feel today.

1. I have been able to laugh and see the funny side of things <input type="checkbox"/> As much as I always could <input type="checkbox"/> Not quite so much now <input type="checkbox"/> Definitely not so much now <input type="checkbox"/> Not at all	6. * Things have been getting on top of me <input type="checkbox"/> Yes, most of the time I haven't been able to cope at all <input type="checkbox"/> Yes, sometimes I haven't been coping as well as usual <input type="checkbox"/> No, most of the time I have coped quite well <input type="checkbox"/> No, I have been coping as well as ever
2. I have looked forward with enjoyment to things <input type="checkbox"/> As much as I ever did <input type="checkbox"/> Rather less than I used to <input type="checkbox"/> Definitely less than I used to <input type="checkbox"/> Hardly at all	7. * I have been so unhappy that I have had difficulty sleeping <input type="checkbox"/> Yes, most of the time <input type="checkbox"/> Yes, sometimes <input type="checkbox"/> Not very often <input type="checkbox"/> No, not at all
3. * I have blamed myself unnecessarily when things went wrong <input type="checkbox"/> Yes, most of the time <input type="checkbox"/> Yes, some of the time <input type="checkbox"/> Not very often <input type="checkbox"/> No, never	8. * I have felt sad or miserable <input type="checkbox"/> Yes, most of the time <input type="checkbox"/> Yes, quite often <input type="checkbox"/> Not very often <input type="checkbox"/> No, not at all
4. I have been anxious or worried for no good reason <input type="checkbox"/> No, not at all <input type="checkbox"/> Hardly ever <input type="checkbox"/> Yes, sometimes <input type="checkbox"/> Yes, very often	9. * I have been so unhappy that I have been crying <input type="checkbox"/> Yes, most of the time <input type="checkbox"/> Yes, quite often <input type="checkbox"/> Only occasionally <input type="checkbox"/> No, never
5. I have felt scared or panicky for no very good reason <input type="checkbox"/> Yes, quite a lot <input type="checkbox"/> Yes, sometimes <input type="checkbox"/> No, not much <input type="checkbox"/> No, not at all	10. * The thought of harming myself has occurred to me <input type="checkbox"/> Yes, quite often <input type="checkbox"/> Sometimes <input type="checkbox"/> Hardly ever <input type="checkbox"/> Never

“Standardized care”

- ▶ Not synonymous with “one size fits all”
 - ▶ Individualize care to promote the autonomy of each new mom
- ▶ Normalize common postpartum issues
 - ▶ And break myths
- ▶ Link with resources in the hospital and community
 - ▶ Psychiatry
 - ▶ Physical therapy
 - ▶ Social services

Postpartum outreach initiative

- ▶ Home visits through the first year of life to screen for postpartum depression and link back to clinic and psych services as needed
- ▶ Administration of Edinburgh screen and Ages and Stages Questionnaire (ASQ) at home – provide resources for mom and baby
- ▶ Can call and connect to clinic staff from the patient's home in real time as needed for acute concerns
 - ▶ Work with the patient on when she can come in

Take-home message

- ▶ Pregnant patients are individual women who need personalized care, however guides / frameworks can help ensure that pertinent topics aren't missed
- ▶ Many women meet criteria for aspirin use in pregnancy!
- ▶ Care does not end once the baby is delivered: embrace the 4th trimester
- ▶ Postpartum depression is common – address and treat it!
- ▶ Anticipatory guidance is key – talk through possible issues each trimester to help manage anxiety and normalize uncomfortable topics
- ▶ Provide each woman the information necessary so she can have the autonomy to own her pregnancy and decisions
